

Bringing the latest rotary and linear motion solutions to your facility for a unique on-site learning experience.

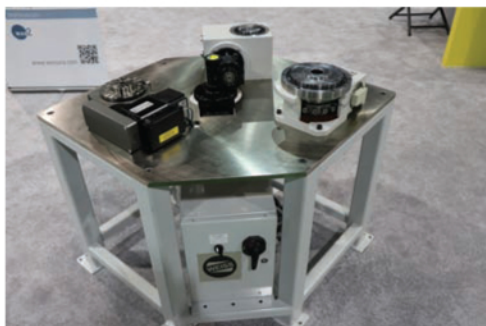

We will bring a selection of our working trade show demos of your choosing to your facility for a day of learning. Engineering and technical staff learn not only how to specify and properly size these products but we will also provide basic programming training of our more advanced products. Our goal is to custom tailor a day of learning for your company on WEISS's technologies, products and solutions.

Learn about how the WEISS LS280 transfer system can improve your output cycle times.

Experience how to program multi-axis applications using the WAS software from WEISS along with our offering of direct-drive products.

Gain a complete understanding of how to size, specify and apply rotary indexing applications to maximize your rotary performance cost effectively.

Configuring and programming a pick and place unit is fast and easy. We'll show you first hand how WEISS provides a complete pick and place platform using our HP handling units and our WAS software.
